Office Action mailed October 31, 2007 Amendment filed February 25, 2008

## **AMENDMENTS TO THE CLAIMS**

The following listing of claims replaces all previous versions, and listings, of claims in the Application.

## **Listing of Claims:**

Claim 1. (Currently amended) A mobile electronic device network employing provisioning techniques for updating electronic devices, the network comprising:

a device server capable of dispensing at least one update;

an electronic device having at least one of firmware and software, the electronic device being communicatively coupled to the device server; and

an update service in the electronic device, presence of the update service in the electronic device being determinable by the network, wherein when enabled the update service indicates to the network capability of the electronic device to update at least one of firmware and software, electronic device employing the at least one update to update the at least one of firmware and software software; and

wherein one or more parameters specific to updating of firmware and software in the electronic device are provisioned during provisioning of a number assignment module (NAM) in the electronic device, by the network.

Claim 2. (Original) The network according to claim 1, wherein the device server is adapted to store and dispense a plurality of updates, wherein the at least one update dispensed to the electronic device is selected from the plurality of updates based upon characteristics of the electronic device communicated to the device server.

Claim 3. (Currently amended) The network according to claim 2, further comprising:

number assignment module (NAM) parameters provisioned in the electronic device by the network, wherein the network is capable of administering the NAM parameters in the electronic device; and

Filed: March 10, 2004

Office Action mailed October 31, 2007 Amendment filed February 25, 2008

scheduling software for at least one update of one of firmware and software in the electronic device during administration of the NAM parameters by the network.

Claim 4. (Original) The network according to claim 3, wherein the network is capable of determining whether the electronic device supports an over-the-air provisioning function, and wherein the electronic device is capable of executing the over-the-air provisioning function, and wherein the over-the-air provisioning function comprises one of a firmware update function and a software update function in the electronic device.

Claim 5. (Original) The network according to claim 4, wherein one of the firmware update function and the software update function in the electronic device is invoked based upon one of a firmware update service option and a software update service option provided in the electronic device.

Claim 6. (Original) The network according to claim 5, further comprising: an update agent in the electronic device; and

a network server determining a service option and for permitting the electronic device to initiate over-the-air access to one of the firmware update service option and the software update service option in the electronic device, wherein the network is adapted to employ the means for determining a service option to determine one of an enabled firmware update service option and an enabled software update service option in the electronic device and the network is adapted to invoke the update agent while initializing a number assignment module in the electronic device.

Claim 7. (Original) The network according to claim 6, wherein one of the firmware update service option and the software update service option in the electronic device is adapted to be set by the network without user intervention, and wherein the at least one update selected from the plurality of updates is disseminated to the electronic device, and wherein the update agent is invoked in the electronic device for updating one of firmware and software employing the at least one updates.

Appln. No. 10/797,176 Filed: March 10, 2004

Office Action mailed October 31, 2007 Amendment filed February 25, 2008

Claim 8. (Original) The network according to claim 7, further comprising:

over-the-air delivery of the at least one update to the electronic device from a delivery server after determining that one of the firmware update service option and the software update service option in the electronic device is set.

Claim 9. (Original) The network according to claim 4, further comprising: one of a firmware update service function and a software update service function in the electronic device; and

a network server for facilitating network-initiated over-the-air access to one of the firmware update service option and the software update service option in the electronic device, wherein the network initializes the number assignment module in the electronic device and, after determining that one of the firmware update service option and the software update service option in the electronic device is enabled, initiating download of at least one update and updating one of the firmware and software of the electronic device.

Claim 10. (Original) The network according to claim 1, wherein the electronic device comprises at least one of a plurality of mobile electronic devices, and wherein the plurality of mobile electronic devices comprise at least one of a mobile cellular phone handset, personal digital assistant, pager, MP3 player, and a digital camera.

Claim 11. (Currently amended) A mobile electronic device network adapted to update electronic devices and perform over-the-air number assignment module parameter provisioning, the network comprising:

an electronic device comprising one of firmware and software, the electronic device also comprising number assignment module parameters <u>specific to updating one or both of firmware and software</u>, the electronic device being communicatively coupled to at least one server; and

wherein presence of support for at least one of a firmware update service option and a software update service option in the electronic device is determinable by the network, wherein when enabled, the presence of support for the at least one of a

Office Action mailed October 31, 2007

Amendment filed February 25, 2008

firmware update service option and a software update service option indicates to the

network that the electronic device is capable of updating one of firmware and software,

wherein the electronic device is adapted to communicate the presence of support for

the one of the firmware update service option and software update service option to the

network, and wherein the electronic device is also adapted to communicate device

specifications to the network when the network attempts to provision the number

assignment module parameters.

Claim 12. (Previously presented) The network according to claim 11, wherein

the at least one server dispenses at least one of a plurality of updates to the electronic

device based upon the presence of support for the one of the firmware update service

option and the software update service option and device specifications communicated

to the at least one server by the electronic device.

Claim 13. (Previously presented) The network according to claim 11, wherein

the network is adapted to manage updating at least one of firmware and software based

upon the presence of support for the one of a firmware update service option and a

software update service option in the electronic device determinable by an over-the-air

provisioning function in the network.

Claim 14. (Previously presented) The network according to claim 13, wherein

the network is adapted to determine a state of the one of the firmware update service

option and the software update service option in the electronic device and provision a

universal resource locator in the electronic device for at least one server in the network.

wherein the at least server is employed to download updates to the electronic device.

Claim 15. (Original) The network according to claim 11, wherein the electronic

device comprises at least one of a plurality of mobile electronic devices, and wherein

the plurality of mobile electronic devices comprise at least one of a mobile cellular

phone handset, personal digital assistant, pager, MP3 player, and a digital camera.

200701940-2 5

Appln. No. 10/797,176 Filed: March 10, 2004

Office Action mailed October 31, 2007

Amendment filed February 25, 2008

Claim 16. (Previously presented) A method of updating software in a wireless communication device in a wireless network, the method comprising:

determining a value of one of a firmware update service option number and a software update service option number in the wireless communication device by the wireless network; and

downloading one of a firmware update and a software update from a server in the wireless network, if one of the firmware update service option number and the software update service option number is determined to have a predetermined value.

Claim 17. (Original) The method according to claim 16, wherein determining is performed during an over-the-air parameter administration operation for programming number assignment module parameters.

Claim 18. (Original) The method according to claim 17, wherein the over-the-air parameter administration operation comprises:

paging one of a firmware update service option number and a software update service option number in the wireless communication device;

verifying an identity of the wireless communication device using at least one authentication process; and

responding to the paging, if the wireless communication device is capable of supporting the over-the-air parameter administration operation.

Claim 19. (Previously presented) The method according to claim 18, wherein responding to the paging further comprises:

indicating support for one of a firmware update service option and the software update service option by sending one of the firmware update service option number and the software update service option number, if the wireless communication device supports one of the firmware update service option and the software update service option; and

Filed: March 10, 2004

Office Action mailed October 31, 2007

Amendment filed February 25, 2008

indicating lack of support for one of the firmware update service option

and the software update service option, if the wireless communication device does not

support one of the firmware update service option and the software update service

option.

Claim 20. (Original) The method according to claim 16, wherein downloading

comprises:

setting a flag in the wireless communication device indicating availability of

an update package for updating the wireless communication device during an over-the-

air parameter administration operation changing number assignment module

parameters;

sending a universal resource locator identifying at least one server to the

wireless communication device during an over-the-air parameter administration

operation changing number assignment module parameters; and

retrieving update information from the at least one server based upon the

flag.

Claim 21. (Original) The method according to claim 16, wherein determining

comprises:

receiving a general page message indicating one of a firmware update

service option and a software update service option by the wireless communication

device:

verifying support of one of the firmware update service option and the

software up-date service option by the wireless communication device; and

sending a response to a base station indicating support of one of firmware

and software updates when the wireless communication device verifies support of one

of the firmware update service option and the software update service option.

Claim 22. (Original) The method according to claim 21, wherein verifying further

comprises:

200701940-2 7

Filed: March 10, 2004

Office Action mailed October 31, 2007

Amendment filed February 25, 2008

paging the wireless communication device for one of a firmware update

service option number and a software update service option number;

comparing one of the firmware update service option number and the

software update service option number received on one of a stored firmware update

service option number and a stored software update service option number in the

wireless communication device, to determine a match by the wireless communication

device;

responding to the paging, if a match occurs, wherein responding to the

paging comprises indicating that the wireless communication device is associated with

one of the firmware update service option number and the software update service

option number; and

responding to the paging indicating a negative match if a match does not

occur.

Claim 23. (Original) The method according to claim 16, wherein the electronic

device comprises at least one of a plurality of mobile electronic devices, and wherein

the plurality of mobile electronic devices comprise at least one of a mobile cellular

phone handset, personal digital assistant, pager, MP3 player, and a digital camera.

Claim 24. (Previously presented) A computer-readable storage, having stored

thereon a computer program having a plurality of code sections enabling over-the-air

updating of at least one of firmware and software in an electronic device via a wireless

network, the code sections executable by a processor for causing the processor to

perform the operations comprising:

receiving at least one message from a server over the wireless network as

part of an over the air parameter administration process, the message comprising a

service option parameter;

determining whether a value of the service option parameter corresponds

to one of a firmware update service option and a software update service option; and

engaging in over the air updating of the at least one of firmware and

software of the electronic device via the wireless network, if it is determined that the

Filed: March 10, 2004

Office Action mailed October 31, 2007

Amendment filed February 25, 2008

value of the service option parameter corresponds to the one of a firmware update

service option and a software update service option.

Claim 25. (Previously presented) The computer-readable storage according to

claim 24, wherein the electronic device is a battery-operated handheld electronic

device.

Claim 26. (Previously presented) The computer-readable storage according to

claim 25, wherein the electronic device is a cellular telephone.

Claim 27. (Previously presented) The computer-readable storage according to

claim 24, wherein the received message is a cellular network message for paging a

subscriber telephone.

Claim 28. (Previously presented) The computer-readable storage according to

claim 24, wherein the received service option parameter is compatible with the

Electronics Industries Alliance (EIA)/Telecommunications Industry Association (TIA) IS-

683 standard.

Claim 29. (Previously presented) The computer-readable storage according to

claim 24, the operations further comprising:

sending a message over the wireless network indicating the presence of

support for the one of a firmware update service option and a software update service

option, if it is determined that the value of the service option parameter corresponds to

the one of a firmware update service option and a software update service option.

Claim 30. (Previously presented) The computer-readable storage according to

claim 24, the operations further comprising:

verifying the identity of the server to the electronic device using an

authentication procedure, prior to engaging in over the air updating.
